Indicators for the evaluation of the attainment of the strategic aim at national level

ANNEX 3

Item No.	Name of indicator	Definition	Information source	Measuring unit	Reference value (year)	Target value / Year	
						2020*	2030*
	Proposed indicators at national level for attainment of the strategic objective						
1	**GDP per capita in PPS (EU 27=100) ESNÚ 95**	**Gross domestic product** in market prices according to methodology of ESNÚ 95 expresses the final result of productive activity of residential producers for the whole economy. **Purchasing power parity** eliminates effects of different price levels among countries. The basis for calculation of purchasing power parity is the European Comparative Programme, on which national statistical offices, including SO SR, are participated. GDP per capita in PPP enables a territorial comparison of performance of economy among countries.	EUROSTAT (SO SR)	%	72.3 (2008)	83	90
2	**Growth rate of GDP (at constant prices), the same period of previous year = 100**	**Gross domestic product** in market prices expresses the final result of productive activity of resident producers for the whole economy. Annual growth rate of GDP enables a comparison of the dynamics of the development of economy.	EUROSTAT (SO SR)	%	-4.7 (2009)	5,5	4,7
3	**Business investment – gross fixed capital formation by the private sector as a % of GDP**	**Gross fixed capital formation** according to methodology of ESNÚ 95 includes the acquisition of non-current assets decreased by disposal (negative acquisition) of non-current assets by producers – residents during the respective period. It also includes increases in the value of certain non-produced assets realized using productive activity of institutional entities. Non-current assets are tangible and intangible assets that were produced in the production process and will be used in other production processes repeatedly or continuously for a period longer than one year.	EUROSTAT	%	21.3 (2009)	26	23

Indicators for the evaluation of the attainment of the strategic aim at national level

ANNEX 3

4	**Share of net disposable income of households per inhabitant by ESA 95**	**Disposable income**, net, according to methodology of ESNÚ 95 – disposable income of resident households is one of key indicators of regional accounts. It describes the result of main transactions concerning the household sector (production activity, allocation and reallocation of income and other transactions) among the individual regions.	EUROSTAT (SO SR)	EUR/inhab.	6301 (2007)	15860	31000
5	**Labour productivity per person employed (EU 27=100) by ESA 95**	It is calculated as GDP in PPP divided by the number of employees according to ESNÚ 95 with the aim to provide an overall view of productivity of national economies in relation to the average of EU.	EUROSTAT (SO SR)	PPP/employee	79.3 (2008)	84	92
6	**Emissions of the greenhouse gases - index of greenhouse gas emissions**	Emissions of greenhouse gases are expressed in 1000 tonnes of pollutant expressed in CO2 equivalent. The index shows the level of emissions of greenhouse gases with regard to the basic reference value (in connection with the Kyoto Protocol – reference value for non-fluorinated greenhouse gases is the year 1990 and for fluorinated greenhouse gases the year 1995).	EUROSTAT (SO SR)	%	65.2 (2007)		
7	**Electricity generated from renewable sources - % of gross electricity consumption**	It is calculated as electricity generated from renewable sources divided by gross national consumption of electricity for the respective calendar year. **Electricity generated from renewable sources -** wind, solar, geothermal energy, hydraulic power plants and biomass/waste.	EUROSTAT (SO SR)	%	16.6 (2007)
